

Service Description - cnips Essentials Plan

FEATURE	DESCRIPTION
Pipelines	A pipeline is the executable integration path in cnips. It connects a data source through processing steps to one or more destinations.
Integration Builder	Graphical low-code and no-code editor for building and configuring pipelines.
Sources	Data sources through which data enters or is pulled into cnips - webhooks, APIs, files, extractors and events from connected systems.
Destinations	Targets to which processed data is delivered - databases, APIs, queues, storage as well as cloud and on-premise systems.
Extractor	Component for continuous ingestion of data from connected systems, independent of individual events.
Transformations	Conversion, filtering, mapping and enrichment of data within the pipeline.
Pre-built Apps	Connectors provided by the supplier for connected applications, available for use in pipelines.
Community Support	Support via the cnips community. No guaranteed response time.

QUOTAS	
Flows per month	1.000
Private Apps	0
Workspaces	1
Schedule Interval	60 minutes
